

# Introducing Kitty Academy!

We all know cats are unique, which is why we've created **Kitty Academy**, a new section on CommuniVET.com featuring **30-minute, on-demand CE-accredited webcasts dedicated exclusively to feline health.**

Led by board-certified feline specialist **Dr. Kelly St. Denis**, these **concise and practical on-demand sessions** will dive into common feline diseases and everyday challenges in veterinary practice.

Now available!

## Feline diabetes mellitus: Beyond insulin

While insulin has been a mainstay in the treatment of feline diabetes for decades, new treatments and creative monitoring options have increased our ability to provide individualized care. Dr. St. Denis will explore an expanding range of therapeutic options: from nutrition to insulin to the newer SGLT2 inhibitors. She will also examine how these options support the concept of Spectrum of Care.
